August 26 2025,

TO: Trustees for the time-being, Soralia Village Home-Owners Association.

Dear Soralians,

FURTHER TO MY SUBMITTED PROPOSAL

A Vision for a Connected Soralia: The Community Hub Proposal

Document: Presentation Summary & Demo Context

Purpose: To provide a narrative for the Soralia Community Directory & Resource Hub proposal, to be presented alongside visual mockups at the Special General Meeting.

1. The Challenge: A Disconnected Community

Currently, our community relies on several communication channels. These include *inter alia*:

1.1 **Official Email Communication** from our Management Agents: Residentia

1.2 A "Community Management Software" platform called **WeconnectU**, that is run by Residentia, and which is mainly purposed for billing related matters.

1.3 An official '**Soralia Village 2025**' Whatsapp Group, that has admin-only communication, lacks document management, history, and serves Notices with the same priority as less formal communication. A major consideration here is the lack of appropriate flags for Legal Notices versus news items, with the result that a Notice about a matter related to a lost dog is given the same priority as a notice involving special legal attention.

1. 4. Unofficial Whatsapp groups such as "**Soralians**", that may be characterised as chat groups.

The result can be summarised as the following. Scattered information, fragmented communication and word-of-mouth, that is 'lost-in-translation'

Finding a trusted local service, connecting with a neighbor who shares an interest, or accessing important HOA documents can be a challenge. We lack a central, digital heart for Soralia.

2. The Solution: A Central Hub for Every Resident

As Netbones Pty Ltd, I am proposing the creation of a single, easy-to-use website and mobile app that brings 'everything Soralia' into one place. This isn't just a directory; it's a comprehensive **Community & Resource Hub** designed for modern living. It need not supplant other channels, but rather integrate communication via available API and/or webscraping methods, to provide a coherent narrative.

This platform will be built by myself and/or professional developers at Netbones Solutions, using secure and reliable technology (React, Node.js) to ensure it's both powerful and easy to use.

3. Visualizing the Soralia Hub (Demo Accompaniment)

The rudimentary demo html mockups you are seeing illustrate the start of a vision process for this platform. A site that has searchable resident/homeowner cards with dashboards for those logged in. Imagine logging into your personal, secure Soralia Hub account. You would see:

– A Clean, Modern Dashboard:

The homepage would welcome you with recent community announcements, a global search bar to find anything you need, and quick links to the most used features.

– The Community Directory:

- * (Demo shows a searchable grid of resident profiles)*
- * Here you can finally put a face to a name! You could look up neighbors, see their (privacy-protected) profiles, and connect with people who have similar interests or offer home-based services like tutoring or artisan crafts.

* The Service Directory:

- * (Demo shows a categorized list of services like "Plumbing," "Home Care," "Deliveries")*
- * This is our trusted, internal list of services. Whether you need a pharmacy that delivers, a recommended electrician, or a local garden service, this directory will be the first place you look. You can add services you offer or recommend.

* The Resource Hub & Knowledge Base:

- * *(Mockup shows an article titled "DIY Fixes for Common Geyser Issues" and another on "Waste Management Schedules")*
- * This is our community's digital library. It will house everything from official HOA bylaws and meeting minutes to helpful resident-created guides on everything from local plant care to emergency procedures.

4. Key Benefits for Every Resident

- * Enhance Connection: Easily find and connect with your neighbors.
- * Improve Accessibility: Access a curated list of trusted services anytime.
- * Centralize Information: Stop hunting for information. Find everything you need in one place.
- * Empower Residents: Manage your own household profile, control your privacy, and contribute to the community knowledge base.

5. The Path Forward

The attached resolution is the first official step. By voting YES, we authorize the Steering Committee to formalize an agreement with Netbones and begin the development process, turning this vision and these mockups into a valuable asset for our entire community.
